

Final Project Proposal

MC's Casino Corner

Our final project will be a casino. Players will enter and try their luck in games such as baccarat, blackjack, slots (new and improved), roulette, and hopefully poker. Money will be exchanged between the player and our fine establishment in our high stakes, no-limit games. Players will start off with a certain amount of cash and when they run out, they lose the game. Players may exit whenever they want and their money will be kept track of. Games that require more than 1 player will have a dealer (computer opponent) that plays for the casino, otherwise it will be entirely based on chance. New features we would like to include in our project are:

- User accounts
- Data processing (user accounts)
- Tracking cards in a deck
